16. ABSTRACT

As part of the development of an Air Quality Maintenance Plan (AQMP) for the State of Connecticut, an update of the State's point source emission inventory to 1975 is required. Walden was retained by the Environmental Protection Agency (EPA) to assist the State in this task, with a specific requirement to update fuel use and combustion information for approximately 2500 point sources. Update information was collected by an emission source survey. This data was coded in STARTER format and forwarded to the Connecticut Department of Environmental Protection (DEP) for introduction into their inventory system.

February, 1977

This air pollution report is issued by the Region I office of the Environmental Protection Agency, to assist state and local air pollution control agencies in carrying out their program activities. Copies of this report may be obtained, for a nominal cost, from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 21151.

This report was furnished to the Environmental Protection Agency by the Walden Division of Abcor, Inc., Wilmington, Massachusetts in fulfillment of EPA Contract No. 68-02-1377, Task Order 6. This report has been reviewed by the Air Programs Office of EPA Region I and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

ACKNOWLEDGEMENTS

Walden wishes to express its appreciation to Mrs. Audrey R. McAllister, Mr. Peter X. Hagerty, and Ms. Miriam Fastag of U.S. EPA Region I for their assistance throughout the project. These individuals served as project managers for EPA during various stages of this project.

The cooperation of Mr. Ronald C. Freeto of the State of Connecticut Department of Environmental Protection is also sincerely acknowledged.

A special debt of gratitude is extended to the Walden technical staff who contributed significantly to this project - Ms. Linda Fereshetian, Mr. James Hanson, and Mr. David R. Dorman. The contribution of Mr. Paul Morgenstern who served as project manager during an earlier phase of this program is also gratefully acknowledged.

I. INTRODUCTION

As part of the development of an Air Quality Maintenance Plan (AQMP) for the State of Connecticut, an update of the State's point source emission inventory to 1975 is required. Walden was retained by the Environmental Protection Agency (EPA) to assist the State in this task, with a specific requirement to update fuel use and combustion information for approximately 2500 point sources. Update information was collected by an emission source survey. This data was coded in STARTER format and forwarded to the Connecticut Department of Environmental Protection (DEP) for introduction into their inventory system.

II. METHODOLOGY

The flow diagram in Figure 1 illustrates the structure of our project plan. The project comprised the following tasks:

- Establishment of a priority system for updating sources
- Determination of which source to update based on the priority system
- Devising a tracking system using the STARTER printout
- First mailing of inventory questionnaire (Sept. 1976)
- Second mailing follow-up (Oct. 1976) and informational telephone contact (Nov. 1976)
- Coding all updated information

The priority system was comprised of a two-tier hierarchical structure. First, information was to be gathered for the Planning Regions in the following order: (1) Naugatuck Valley*, (2) Planning Region 1*, (3) Planning Region VII* and (4) Planning Region VIII*. Second, the information gathered for each Planning Region was to be coded according to the following order: (1) all boiler sources, (2) incinerators, and (3) processes. Once the

*Naugatuck Valley includes the towns of Ansonia, Beacon Falls, Bethany, Seymour, Shelton, Derby, Naugatuck, Waterbury; Planning Region 1 includes Greenwich, Stamford, New Canaan, Darien, Norwalk, Wilton, Weston, Westport; Planning Region VII includes Monroe, Easton, Trumbull, Stratford, Bridgeport and Fairfield; and Planning Region VIII includes Meriden, Wallingford, Hamden, Woodbridge, North Haven, North Branford, Guilford, New Haven, Madison, Branford, East Haven, West Haven, Orange and Milford.

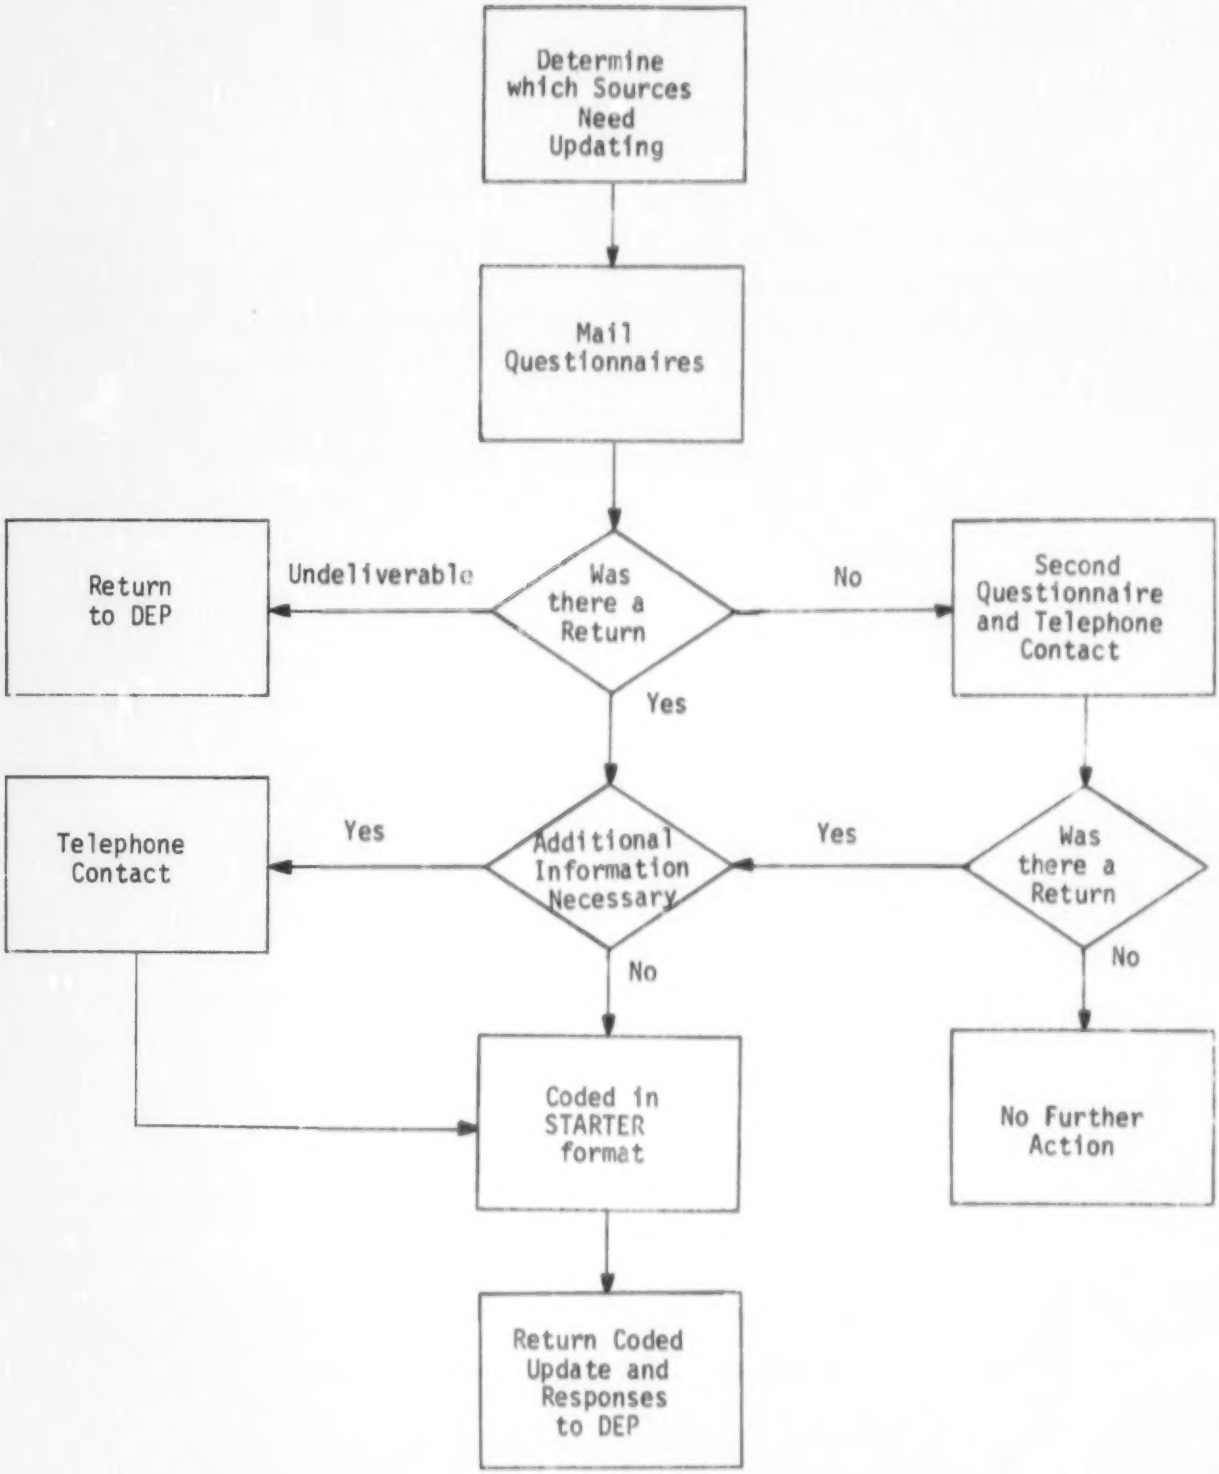

FIGURE 1
STRUCTURE OF WORK PROGRAM

priority system was established, sources previously updated by DEP were eliminated from the STARTER generated mailing list. A coded system was devised to track mailings and responses from the contacted establishments. The first mailing of questionnaires transpired during early September. As the responses returned, any data needing clarification or supplemental information were obtained through telephone contact. Subsequently, all responses were coded on STARTER change cards. Non-responsive sources were recontacted by a second mailing in mid-October and telephone contacts during November. As responses were received from the second mailing, they too were analyzed and coded.

Questionnaires were mailed to 1317 premises in four planning regions in Connecticut as outlined below.

Region	Establishments Contacted
Naugatuck Valley	162
Planning Region I	304
Planning Region II	259
Planning Region VIII	592
TOTAL	1317

These figures account for all of the cities and towns comprising the four regions. Undeliverable questionnaires which were returned to us by the United States Postal Service were forwarded to the State for direct follow-up.

Emissions were calculated for process and incinerator sources only using AP-42 emission factors.* Emissions were not calculated for boilers since the STARTER program calculates them directly from the fuel use input field.

III. SUMMARY OF RESULTS

The following statistics reflect the final status of the inventory survey.

*Compilation of Air Pollution Emission Factors AP-42 U.S. Environmental Protection Agency (1973).

Region	Establishments Contacted	Complete Responses Received	Partial Responses Received	No Response	Undeliverable Returns
Naugatuck Valley	162	144	0	18	0
Planning Region I	304	236	1	49	18
Planning Region VII	259	187	4	60	10
Planning Region VIII	592	450	6	106	36
Total	1317††	1017	11*	233**	64†
Percent of Total Contacted		77.2	0.8	17.7	4.9

Coded responses were intermittently forwarded to the State for keypunching. Many responses returned with information for non-registered sources and/or changed contacts and addresses. Since these data items were not codable a "Special Attention" notice was attached to the response form for an additional follow-up. In addition a "Special Attention" notice was attached to some process sources where difficulties arose in coding. All responses received were coded. The only limitations for not coding were: (1) the inability to make telephone contact to obtain necessary information and (2) the impossibility to code non-responsive sources.

IV. DATA RELIABILITY

The most accurate portion of the data collected for the survey is the annual fuel usage for boilers since records of this information are maintained by the company and/or their fuel supplier.

Based on our experience in contacting the sources, it was observed that the wording of DEP question on firing rate allowed two possible interpretations: (1) the maximum hourly rate, and (2) the actual hourly rate. Our assumption in coding this information when supplied by the source was that it was the maximum hourly firing rate. The respondees may not always have used this interpretation. In our telephone contact, requests for this item were for the maximum rate. The hourly firing rate appears only on the questionnaire answer

* See Table 3.

**See Table 2.

† See Table 1.

†† See Appendix A

form and not in the STARTER format. However, it was frequently used by Walden to calculate the annual operating hours since this data item was rarely supplied by the establishments.

The reliability of the process data from the process sources is also open to some question since the questionnaire was not specifically tailored to each process source.
